<b>General Program Description</b>	Two-year program in a specific industry coverage or product group selected at the conclusion of the training program. Financial Analysts work in teams with peers and senior professionals. 5 weeks of classroom training led by current Financial Analysts and taught by Citigroup professionals as well as public accounting and business school professionals.	After a period of brief rotations in both Equity & Fixed Income, new Analysts are placed on a desk as a Jr. Salesperson or Trader. Opportunity for promotion to Associate after 2nd year.	The Quantitative Trading and Research Program is structured to develop two avenues to respond to the increasingly quantitative and technical demands of the financial world. The first path gives Analysts the chance to spend one year working on a trading desk (Fixed Income, Equity, or Municipals) and one year in a research area (Fixed Income Quantitative Research or Equity Derivatives Research) to give them the opportunity to understand how the strategies and analysis in both areas complement each other, and how the functions of each can be integrated. The second path focuses solely on the strategies and modeling techniques mastered in investment analytics, giving Analysts two years in two different areas of research to strengthen their perspective on different products.	Two to three year program that places analysts in FICM product group or ECM. Focus is on gaining exposure to finance, modeling, economics and risk analysis. Analysts take part in an 10 week intensive training program led by senior banking professionals, university professors, and practitioners in the industry.	Citigroup's Finance Analysts are part of a world-class Finance team that guides the financial business functions of the world's largest financial services firm. FA's are provided with diverse placement assignments in one of several Citigroup finance functions: Tax, Treasury, Financial Control, Accounting, Strategy & Planning and CFO Management. Analyst program is two to three years.	2-year program with 3-phase product, sales and professional skills training.	The training program is intensive. Classroom sessions are mixed with practical training, project work, role-playing exercises, business games and introductions to the different business areas. The technical training we include in the program is tailored to your own individual needs and you will be able to access the most relevant training for your position and current level of skill to ensure that you develop quickly on the program.	Operations maintains the systems and processes that are crucial to the success of our core global business. In fact, Operations makes everything we do possible, continuously working to monitor and improve our ability to provide clients with fast, reliable and accurate execution of their business needs.
